

TOP BREEDER™

Pelleted Feed to Rapidly Improve Hair Coat and Body Condition

FEATURES

- High levels of useable energy
- Highly palatable and digestible
- High fat content. All from vegetable sources.
- Contains flaxseed and stabilized rice bran
- High amount of beet pulp
- Designed to promote normal gut function
- Fully fortified and balanced with all essential vitamins and minerals
- Triple re-cleaned, heavy (42+ lb/bu) oats
- Corn free from aflatoxins and fumonisins
- Pure cane molasses
- Available in 1/2 inch diameter pellets

FEEDING INSTRUCTIONS

- Feed approximately 1/2 to 1 1/2 pounds per 100 pounds body weight per day. Feeding levels vary with the requirements for maintenance, pregnancy, lactation, growth and the amount of work. Seasons, types of roughage, and the general condition of the horse will also affect daily feed allowances.
- Always provide good quality hay and/or pasture; clean, fresh water and salt. Do not feed additional proteins, vitamins or minerals except on the advice of a nutritionist.
- Consult your veterinarian concerning proper health programs and always maintain a good worm control program.
- For more details on feeding, please see the following table and notes.

FEEDING GUIDELINE FOR TOP BREEDER™

Horse	Average Amount of Feed (lb/day)	Amount of Hay or Pasture Equivalent (lb/day)
Weanlings	5	11
Yearlings	7	15
Stallions	4	18
Pregnant Mares	5	18
Lactating Mares	10	20
Light work	5	16
Medium work	8	17
Intense work	13	18
Two year olds in training	8	16

(FEEDING GUIDELINE CONT.)

- This Guideline is for horses with a mature body weight range of 1100-1300 lb (500-590 kg).
- The hay in this Guideline is an average quality mixed hay (12% crude protein & 0.85-0.90 Mcal/lb). As the hay quality drops, the amount of feed will need to be increased and a higher protein level may also be required. Conversely, better quality hay can reduce the quantity of feed needed and may also allow for a lower protein feed.
- Pasture equivalent means at the same moisture content and same nutritional quality as the hay.
- The amount of feed in this Guideline is meant as a starting point. Individual horse needs will vary; therefore feeding should be adjusted per individual.
- The range of feed required is wide. For "easy keepers" on excellent hay or pasture, the amount of feed may be halved. On the other hand, "hard keepers" on extremely poor hay or pasture may need double the amount of feed.
- The amount of feed given at any one time should be no more than 0.5% of the horse's body weight. For example, a 1000 lb horse should be fed no more than 5 lb per feeding.
- For nursing foals, **ORIGINAL 16®** or **FOAL & WEANLING™** is recommended.
- If, for whatever reason, a horse is fed less than 4 lb of feed per day, a comprehensive supplement such as **McCAULEY's M30®** should be considered as an alternative. Please consult McCauley's nutritionists for more information.

GUARANTEED ANALYSIS

Crude Protein, Min.	14.0%
