The following feeding directions are guidelines to maintain desired body condition and performance. Feeding rates need to be adjusted according to the horse's body condition and activity level. Divide the recommended daily feeding rate into 2 or more meals per day and feed with good quality hay or pasture equivalent at the rate of 1.0-1.75 LB per 100 LB bodyweight or kg per 100 kg bodyweight to provide a minimum of 50% of the diet from forage.

Performance horses may benefit from being fed more frequently. Clean water should be available at all times. Horses that have been exercised should be cooled out and re-hydrated properly before being fed and before having access to unlimited water.

CAUTION: Store feed in a clean, cool and dry location. Storage area should be free of insects and rodents. Do not allow animals access to feedstuffs that show signs of insect or rodent infestation. Do not allow animals access to hot or moldy feedstuffs at any time.
